

Space Industry Charts

Jun 8, 2025 - 1929 words

Christopher Kalitin Blog (<https://ckalitin.github.io/posts/space-industry-charts/>)

I'm very open to ideas for new charts!

I'm in this for the love of the game pls send me ideas on [X](https://x.com/CKalitin) (<https://x.com/CKalitin>) or email (christopher.kalitin@gmail.com (<mailto:christopher.kalitin@gmail.com>)).

[See the Github repo I wrote to generate these charts!](https://github.com/CKalitin/mcdowell-dataset-analysis) (<https://github.com/CKalitin/mcdowell-dataset-analysis>)

CSVs of all the data is also available in the repo if you'd like to visualize it yourself! Or, run the scripts and get your own data for a launch vehicle of your choosing!

[Download All 160 Charts](#) ([%5Cassets%5Cspace-industry-charts.zip](#)).

Type Explanations

There are currently 2 types in which launches are categorised:

- Orbit
- General Launch Payload Type

Orbits:

- LEO (Low Earth Orbit)
- SSO (Sun-Synchronous Orbit)
- MEO (Medium Earth Orbit)
- GTO (Geostationary Transfer Orbit)
- GEO (Geostationary Earth Orbit)
- HEO (High Earth Orbit)
- BEO (Beyond Earth Orbit)

Some polar orbits are considered a subset of SSO. If this is critical to your application, check the [raw csv lists](https://github.com/CKalitin/mcdowell-dataset-analysis/tree/main/examples/outputs/raw_dataframes) (https://github.com/CKalitin/mcdowell-dataset-analysis/tree/main/examples/outputs/raw_dataframes) of the launches for a particular chart. Polar being SSO isn't technically correct but it's a useful simplification. Pls [complain at me](https://x.com/CKalitin) (<https://x.com/CKalitin>) if you disagree my mind isn't hard to sway here.

General Launch Payload Types:

- Starlink
- Commercial
- Chinese Commercial
- Government
- Eastern Government
- Military
- Eastern Military

Eastern is defined as Russia, China, Soviet Union. Fairly arbitrary.

These categories were created for high level views of the global space industry, so they don't perfectly match some launch-vehicle specific charts.

Eg. There are Electron charts categorised by General Launch Payload Type, but obviously Electron isn't launching Russian defense satellites.

Chart Examples & Explanations

Launches Vs Mass By Category:

[Expanded Chart](#) (%5Cassets%5Cspace-industry-charts%5Celectron%5Celectron launches vs mass by orbit.png).

These charts show the distribution of launches by payload mass range. They're also broken down by category.

Eg. how many Falcon 9 launches were between 0 and 1000 kg and to LEO, GEO, etc.

Total Mass Vs Mass By Category:

[Expanded Chart](#) (%5Cassets%5Cspace-industry-charts%5Cf9%5Cf9 total mass vs mass by general launch payload type.png).

These charts are the same as the launch count vs. mass range charts describe above but normalized for mass.

So, instead of launch count per mass range, this is total mass launched per mass range.

Eg. A launch in the 0-1000 kg range with a payload of 500 kg counts as 500 kg in the chart. A launch in the 16-17 t range with a payload of 16.5 t counts as 16,500 kg in the chart.

This weighs each launch by its payload mass, to give a better sense of the distribution of mass launched. Useful for constellations for example, like Starlink.

Launches Vs Month By Category:

[Expanded Chart](#) (%5Cassets%5Cspace-industry-charts%5Cf9%5Cf9 launches vs month by orbit 2010 present.png)

There's a lot of months in the history of a launch vehicle, so this charts gets a bit busy.

Launches Vs Year By Category:

[Expanded Chart](#) (%5Cassets%5Cspace-industry-charts%5Cglobal%5Cglobal launches vs year by general launch payload type 2000 2025.png).

Yea you get what this is right?

Charts in Alphabetical Order
